AUTOMATION

## Wafer Sealer

### OPERATOR FRIENDLY

The Wafer Sealer was built to apply all common sizes of wafers to mailers and boxes. Using a specialized applicator, you will get a perfect seal on your product every time. Use wafers between 1" - 3" in diameter. The machine even works with square wafers! Clear, transparent and white wafers all run on the same machine without the need to change your setup.

### CUSTOMIZATION

No matter your product, we have the applicator for you. The machine can be ordered with either the mailer applicator that applies wafers around the edge of a flat surface or with the box applicator that applies wafers to the corner of boxes. A simple change over of the applicator will allow you the most versatility to run all products on the same machine.

### CONVENIENCE

Dispensing and applying by hand can be time consuming. Using the wafer sealer will provide quick, reliable application of wafers that will look great every single time.

### THE RIGHT SOLUTION

Rugged design. Proven reliability. Simple operation. The benefits you receive go on and on. When it comes to industrial operation, rely on EdgeTec to provide the right solution for your production needs.

### LESS DOWNTIME

The Wafer Sealer is built in the United States and uses only the highest quality materials. With a design built specifically for the application using industrial grade motors and parts, you can expect the EdgeTec Wafer Sealer to run for many years.
