Film Feeder

OPERATOR FRIENDLY

The Film Feeder was built from the ground up to ensure the best operator experience. With custom programming and an HMI to select between different product lengths, the machine is quick to learn and feeds exact lengths of film every time.

CUSTOMIZATION

Almost all elements of the Film Feeder are customizable. When reviewing your requirements, we will help design a machine that will work for you. The machine can fit up to 15.75" wide rolls and a tolerance of +/- 1/16" on every feed.

CONVENIENCE

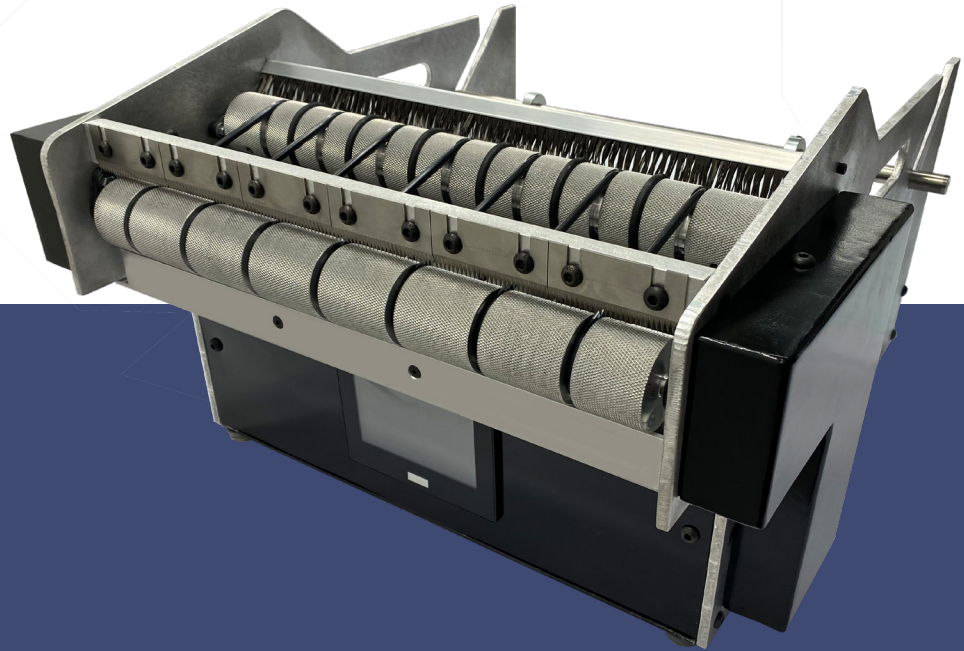

Dispensing by hand or air can be costly and does not provide accurate results. With the introduction of the Film Feeder to your production line, you will see improvements in both accuracy and employee satisfaction.

THE RIGHT SOLUTION

Rugged design. Proven reliability. Simple operation. The benefits you receive go on and on. When it comes to industrial operation, rely on EdgeTec to provide the right solution for your production needs.

LESS DOWNTIME

The Film Feeder is built in the United States and uses only the highest quality materials. With a frame custom cut for the application and industrial grade stepper motors and parts, you can expect the EdgeTec Film Feeder to run for many years.
